

I attended the EEE EYM event on October 3rd at 5:30 pm at Lamburtus 3239

I do not plan on majoring or minoring in EEE but it was important to think about it as when I am working I can ensure that I am taking the environment into account. Additionally, I chose not to do this as I feel it is not quite what I am looking for as I am looking into a robotics field.

It is important to take into account environmental factors when designing robotic systems. Additionally, since EEE is often focused on sustainability, it is important to work with it in mind.
