

Everyone used the math library

Some people set the equations equal to a variable and printed that and some people directly printed it. Some people used the round function and some used fstrings.

Ankur: a) 4, b) 5, c) 5

Grant: a) 4 b) 4 c) 4

Ramon A) 3 B) 3 C) 3

We chose to submit Ankur's code because it was simpler than the other codes. It was also easier to read.
